Customer Guide

Guidelines for Proposed Works Over / Adjacent to Water Corporation Assets up to and including 225mm diameter
INTRODUCTION

This guide only applies for sewer assets up to and including 225mm diameter.

These guidelines (subject to change) provide an outline of the requirements which need to be considered when planning to construct works over the water corporation’s easement or within 1.0 metre of sewer and/or water assets.

This is a legislated requirement under the provisions of the Water Act 1989.

If any works are to be constructed over an easement vested in the water corporation or within 1.0 metre of a water corporation asset, prior approval must be sought from the relevant water corporation. The guidelines establish criteria which assist in protecting sewer and water assets from damage, while ensuring that customers avoid the cost and inconvenience of removing structures which may impede access to an asset for maintenance.

This guide only applies for sewer assets up to and including 225mm diameter.

By following the steps below your application should proceed with minimal delay and inconvenience.

1. Prior to designing any structure or carrying out works, please seek to establish if the proposed structure/or works is to be located over an easement or within 1.0 metre of a sewer or water asset.
2. Request a detailed sewer asset location plan (Size, Depth & Offset) or water asset plan from the relevant water corporation (a standard fee may be applicable).
3. Refer to the guidelines contained within this document to confirm if the proposed works comply with the Water corporation requirements.
4. Lodge an application form with the relevant water corporation along the applicable application fee and a set of building plans. Plans must include a site plan which clearly indicates the type of structure to be built, foundation details and relevant elevation plans.

A standard fee applies for the processing of applications. However, in the event that additional information is required to assess the condition/location of existing assets, the cost is to be borne by the applicant. Costs may include survey and/or Closed Circuit Television (CCTV) investigations.

Note: It is the owner/developers responsibility to confirm the actual location of water corporation assets prior to commencing any works.

For information on how to apply for approval please contact the relevant water corporation.

City West Water – 131 691
South East Water – 131 694

### DEFINITIONS

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>24 Hour Access</strong></td>
<td>Required for maintenance purposes. Unobstructed entry to the sewer is to be maintained at all times. When a structure is constructed boundary to boundary, access via a doorway or roller door is required.</td>
</tr>
<tr>
<td><strong>Adjacent</strong></td>
<td>Includes all works / foundations located within 1.0m of an asset but not over the asset.</td>
</tr>
<tr>
<td><strong>All Works</strong></td>
<td>Includes but is not limited to: All types of building works / structures, site works, construction, demolitions, additions, garages, sheds, carports, outhouses, pergolas, verandas, gazebos, sails, decking, saunas, fences, retaining walls, swimming pools, driveways, paving, tennis courts, posts, light poles, excavations/landscaping, footings / foundations (including ground anchors), utilities, telecommunications, above ground water tanks.</td>
</tr>
<tr>
<td><strong>Angle of Repose</strong></td>
<td>Line of influence from pipe (Generally an angle of 45 degrees taken from the edge of pipe).</td>
</tr>
<tr>
<td><strong>Assets</strong></td>
<td>Includes but not limited to: Sewer mains, water mains, maintenance holes, maintenance shafts, property connection branches, vent shafts and pumping stations</td>
</tr>
<tr>
<td><strong>Cantilevering</strong></td>
<td>Structure or beam extended from a wall or foundation to support a balcony or wall.</td>
</tr>
<tr>
<td><strong>Demountable</strong></td>
<td>Any structure or roof that can be manually dismantled and removed from its current position by two people within a four hour period. <strong>Note:</strong> A statement / work plan by a structural engineer supporting this will be required.</td>
</tr>
<tr>
<td><strong>Dependant Persons Unit (Relocatable Unit)</strong></td>
<td>Must be maintained / monitored by relevant Government Authority. E.g. Department of Human Services units. All other units will be treated as a permanent residence.</td>
</tr>
<tr>
<td><strong>Easement</strong></td>
<td>An area of land, or part of a lot reserved by law for a specific purpose, such as the containment of sewerage / water assets. <strong>Note:</strong> Corporation assets are not necessarily contained within an easement.</td>
</tr>
<tr>
<td><strong>Footings/Foundation</strong></td>
<td>Supporting part of structure below ground level. Includes pier and beam, strip, pad and screw piles.</td>
</tr>
<tr>
<td><strong>Ground Anchors</strong></td>
<td>System of tension rods / cables installed during construction which is used to support structures below ground. E.g. Basement walls.</td>
</tr>
<tr>
<td><strong>Habitable</strong></td>
<td>Any building that is constructed for or can be readily converted to be used for occupancy.</td>
</tr>
<tr>
<td><strong>Height Clearance</strong></td>
<td>Height of structure above ground level that is required to allow for unobstructed access to a sewer main. Is measured from ground level to the height of the structures wall. Applies to eaves, balconies, garages etc.</td>
</tr>
<tr>
<td><strong>Lightweight material</strong></td>
<td>PVC material, Steel Sheeting etc.</td>
</tr>
<tr>
<td><strong>Maintenance Hole</strong></td>
<td>An underground structure with a removable cover at ground level that allows for human and machine access to a sewer main.</td>
</tr>
<tr>
<td><strong>Maintenance Shafts</strong></td>
<td>An access shaft on the sewer main with a removable cover at ground level that allows for machine access only to a sewer main.</td>
</tr>
</tbody>
</table>
### DEFINITIONS

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-structural Infill Slab</td>
<td>Concrete slab which if cut and removed will not compromise the structural integrity of the structure.</td>
</tr>
<tr>
<td>Property Connection Branch</td>
<td>A short length of pipe owned and operated by the relevant water corporation that services properties. It connects the properties sewer drain to the sewer main.</td>
</tr>
<tr>
<td>Registered Contractor</td>
<td>Trained / accredited personnel authorised to carry out specialist work on water corporation assets.</td>
</tr>
<tr>
<td>Sewer Rising Mains, Vacuum Lines and Pressure Sewers.</td>
<td>A pipe that transfers sewerage under pressure from a pumping system.</td>

## 1. ASSETS

Relevant water corporation’s Standard Conditions will apply

<table>
<thead>
<tr>
<th>ITEM</th>
<th>ASSET</th>
<th>CRITERIA</th>
</tr>
</thead>
</table>
| 1.1  | Sewer mains up to and including 225mm diameter and less than 3.5m deep (excluding concrete sewers) | **RESIDENTIAL PROPERTIES**  
Residential structures are not permitted to be constructed over water corporation sewer mains.  
Works adjacent to sewer main require:  
- A minimum 600mm horizontal clearance from the outside edge of the sewer main  
- Footings required will depend on the type of structure.  
- 24-hour access is required.  
  
  **Driven piles are not permitted.**  

If the proposed structure is to be situated within 750mm of the sewer main as shown on the relevant water corporation’s asset plan, confirmation of the sewer’s actual location may need to be determined by the relevant water corporation’s approved representative (this is required as existing fences, for example, may not be positioned as per title boundaries).  

**NOTE:**  
If requested, the relevant water corporation can perform this inspection. A standard fee applies.  

**INDUSTRIAL / COMMERCIAL PROPERTIES**  
Industrial / Commercial Buildings are not permitted to be constructed over sewer mains as 24-hour unobstructed access is required.  
Works adjacent to a sewer main require:  

- 1.0m horizontal clearance from the outside edge of the sewer main, or to be outside of easement (whichever is greater)  
- Footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  
  
  **Driven piles are not permitted.**
<table>

</thead>
</table>
| 1.2  | Sewer mains up to and including 225mm diameter greater than 3.5m deep | **Works over sewer mains greater than 3.5m deep are not permitted.**  
Works adjacent to sewer mains greater than 3.5m deep require a clearance of:  
- 1.0m horizontal clearance from the outside edge of the sewer main, or to be outside of the easement *(whichever is greater)*  
- Footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  
- 24-hour access is required.  
  Driven piles are not permitted.  
**NOTE:**  
City West Water will consider works being constructed over a sewer main deeper than 3.5m on a case-by-case basis. In these circumstances the footings must be founded to the depth of the sewer or on bedrock. A soil test/geotechnical report will be required verifying this. |
| 1.3  | Concrete sewer main less than 3.5m deep | **Works over concrete sewer mains are not permitted as concrete sewer mains have a higher risk of failure.**  
**RESIDENTIAL PROPERTIES**  
Works adjacent to a concrete sewer main require:  
- A minimum 600mm horizontal clearance from the outside edge of the sewer main, or to be outside of the easement *(whichever is greater)*  
- Footings required will depend on the type of structure.  
  Driven piles are not permitted.  
**NOTE:**  
Applications may be considered on a case-by-case basis where concrete sewer mains can be relined / replaced from maintenance hole to maintenance hole. All works will be at the owner’s expense. Details of this option will be investigated upon request.  
CCTV inspection will be required at the owner’s expense.  
**INDUSTRIAL / COMMERCIAL PROPERTIES**  
**Works over concrete sewer mains are not permitted as concrete sewer mains have a higher risk of failure.**  
Works adjacent to a concrete sewer main require:  
- 1.0m horizontal clearance from the outside edge of the sewer main, or to be outside of the easement *(whichever is greater)*  
- Footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.

<th>ITEM</th>
<th>ASSET</th>
<th>CRITERIA</th>
</tr>
</thead>
</table>
| 1.7  | Maintenance hole | **Works over maintenance holes is not permitted as 24-hour unobstructed access is required.**  
Works adjacent to a maintenance hole chamber require:  
- 1.0m horizontal clearance from the outside edge of the cover surround.  
- Footings required will depend on the type of structure.  
- Maintenance hole cover levels must match new surface levels. Where alteration works are applicable the works are to be carried out by the relevant water corporation at the owner’s expense.  
- Where a structure is to be constructed boundary to boundary, suitable access (which meets OH & S guidelines) to the sewer maintenance hole must be provided to allow maintenance equipment and personnel access at all times.  

**Driven piles are not permitted.**  
**NOTE:**  
Maintenance holes can only be opened by the relevant water corporation’s authorised personnel. |
| 1.8  | Maintenance shaft | **Works over maintenance shafts is not permitted as 24-hour unobstructed access is required.**  
Works adjacent to a maintenance shaft require:  
- A minimum 800mm horizontal clearance from the centre line of the cover.  
- Footings required will depend on the type of structure.  
- Maintenance shaft cover levels must match new surface levels. Where alteration works are applicable the works are to be carried out by the relevant water corporation at the owner’s expense.  

**Driven piles are not permitted.**  
**NOTE:**  
Maintenance shafts can only be opened by the relevant water corporation’s authorised personnel. |
| 1.9  | Sewer rising mains, vacuum lines and pressure sewers | **Structures over rising mains, vacuum lines and pressure mains are not permitted.**  
**NOTE:**  
The relevant water corporation will assess the potential impact of a failed sewer rising main, vacuum line and pressure sewer on individual developments and therefore may require clearances greater than 1.0m. The applicant is required to contact the relevant water corporation at the design stage to obtain requirements. |
<table>
<thead>
<tr>
<th>ITEM</th>

| B.   | Sewer mains up to and including 225mm diameter greater than 3.5m deep | **Works over sewer mains greater than 3.5m deep are not permitted.**

Works adjacent to sewer mains greater than 3.5m deep require a clearance of:

- 1.0m horizontal clearance from the outside edge of the sewer main, or to be outside of the easement *(whichever is greater).*
- Pad footings / foundations are permitted.
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.

**Driven piles are not permitted.**

**NOTE:**
City West Water will consider works being constructed over a sewer main deeper than 3.5m on a case-by-case basis. In these circumstances the footings must be founded to the depth of the sewer or on bedrock. A soil test / geotechnical report will be required verifying this.

| C.   | Concrete sewer main less than 3.5m deep | **Works over concrete sewer mains are not permitted as concrete sewer mains have a higher risk of failure.**

24-hour unobstructed access is required.

Works adjacent to a concrete sewer main require:

- A minimum 600mm horizontal clearance from the outside edge of the sewer main, or to be outside of easement *(whichever is greater).*
- Pad footings / foundations are permitted.
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.

**Driven piles are not permitted.**

**NOTE:**
Applications traversing a concrete sewer main may be considered on a case-by-case basis where concrete sewers can be relined from maintenance hole to maintenance hole, at the owner’s expense. Details of this option will be investigated upon request. CCTV inspection will be required at the owner’s expense.

</table>
| C.   | Concrete sewer main less than 3.5m deep | Works over concrete sewer mains are not permitted as concrete sewer mains have a higher risk of failure.  
24-hour unobstructed access is required.  
Works adjacent to a concrete sewer main require:  
• A minimum 600mm horizontal clearance from the outside edge of the sewer main is required, or to be outside of easement *(whichever is greater)*.  
• Pad footings / foundations are permitted.  
• Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  

**Driven piles are not permitted.**  

**NOTE:**  
Applications traversing a concrete sewer main may be considered on a case-by-case basis where concrete sewers can be relined from maintenance hole to maintenance hole, at the owner’s expense. Details of this option will be investigated upon request.  

CCTV inspection will be required at the owner’s expense. |
| D.   | Property connection branch servicing an adjoining property | Works over property connection branches servicing adjoining properties are not permitted as it creates an unacceptable risk to the relevant water corporation’s obligations in providing a service to a neighbouring customer.  
Works adjacent to an adjoining property connection branch require:  
• A minimum 600mm horizontal clearance between the proposed works / foundation and the property connection branch.  
• Pad footings / foundations are permitted.  
• Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  

**Driven piles are not permitted.** |
E. Property connection branch servicing own property

**CRITERIA**

- No structures deemed habitable are to be built over a property connection branch.
- Build over of own property connection branch is not permitted where the branch is servicing more than one property.

Works **adjacent** to property connection branch require:

- Maintaining a minimum of 600mm horizontal clearance between the proposed works / foundations and the property connection branch.
- Pad footings / foundations are permitted.
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.

Works **traversing** a property connection branch require in addition to the above:

- Minimum 600mm vertical clearance.
- Height clearance required, unless demountable.

- Pad footings / foundations are permitted.
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.

**Driven piles are not permitted.**

If the proposed structure is to be situated within 750mm of the sewer main as shown on the relevant water corporation’s asset plan, confirmation of the sewer’s actual location may need to be determined by the relevant water corporation’s approved representative. This is required as existing fences, for example, may not be positioned as per title boundaries.

**NOTE:**

If requested, the relevant water corporation can perform this inspection. A standard fee applies.

Works traversing a sewer main require:

- Consent for the placement of rockeries and other garden ornamentation.
- Feature works must be easily relocatable.
- Below ground ponds are not permitted.

**NOTE:**

The owner will be responsible for the emptying and refilling of water features. This must comply with the current water restrictions in place.

</tr>
</thead>
</table>
| C.   | Concrete sewer main less than 3.5m deep | Works over concrete sewer mains are not permitted as concrete sewer mains have a higher risk of failure.  
24-hour unobstructed access is required.  
Additional fill over concrete sewer mains is not permitted.  
A minimum vertical cover of 600mm over the sewer main is required.  
Site cuts need to show finished surface levels.  
Works adjacent to a concrete sewer main require:  
- A minimum 600mm horizontal clearance from the outside edge of the sewer main is required, or to be outside of easement (whichever is greater).  
- Pad footings / foundations are permitted.  
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  
- Driven piles are not permitted.  
NOTE:  
Applications may be considered on a case-by-case basis where concrete sewers can be relined from maintenance hole to maintenance hole, at the owner’s expense. Details of this option will be investigated upon request.  
CCTV inspection will be required at the owner’s expense. |
| D.   | Property connection branch servicing an adjoining property | Works over property connection branches servicing adjoining properties are not permitted as it creates an unacceptable risk to the relevant water corporation’s obligations in providing a service to a neighbouring customer.  
Works adjacent to an adjoining property connection branch require:  
- A minimum 600mm horizontal clearance between the proposed works / foundation and the property connection branch.  
- Pad footings / foundations are permitted.  
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  
- Driven piles are not permitted. |
### E. Property connection branch servicing own property

#### RESIDENTIAL

- **Maximum fill allowed over property connection branch is 1.0m.**

- **A minimum vertical cover of 600mm over the property connection branch is required. (A cross sectional plan may be required. Must be drawn to AHD levels.)**

  **Plans for site cuts need to show finished surface levels.**

  Works **adjacent** to a property connection branch require:

  - A minimum 600mm horizontal clearance between the proposed works / foundations and the property connection branch.
  - Pad footings / foundations are permitted.
  - Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.
  - Pier and beam foundations traversing the property connection branch must be a minimum of 600mm from the property connection branch but no further away than 1.0m.

  Driven piles are not permitted.

#### INDUSTRIAL / COMMERCIAL

- **No structures are to be built over a sewer connection branch.**

- **Maximum fill allowed over property connection branch is 1.0m.**

  **A minimum vertical cover of 600mm over the property connection branch is required. (A cross sectional plan may be required. Must be drawn to AHD levels.)**

  **Plans for site cuts need to show finished surface levels.**

  - Pad footings / foundations are permitted.  
  - Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  
  - 24-hour access is required.  

  **Driven piles are not permitted.**  

  If the proposed structure is to be situated within 750mm of the sewer main as shown on relevant water corporation’s asset plan, confirmation of the sewer’s actual location may need to be determined by relevant water corporation’s approved representative. This is required as existing fences, for example, may not be positioned as per title boundaries.  

  **NOTE:**  
  If requested, relevant water corporation can perform this inspection. A standard fee applies.  

  Works **traversing** a sewer main require:  
  - Details for reinforced concrete slab  
  - Slab plan to scale indicating the location of full depth saw cuts / breakup slab sections or construction / expansion joint sections where traversing a sewer main.  
  - Construction joints must have a minimum clearance of 600mm offset on each side of sewer main.  
  - A cross section plan showing a minimum 600mm vertical clearance from underside of foundation to the top of sewer main.  
  - Tennis Company to provide a detailed work method for accessing sewer main if maintenance work is required.  
  - A minimum horizontal clearance of 600mm between the posts / light poles and the outside edge of the sewer main is to be maintained.  
  - Footings / foundations must extend a minimum depth to invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  
  - An inspection of the pipes condition, via CCTV, will be required at owner’s / applicant’s expense prior to final approval.  
  - Artificial tennis court surfaces must have a separate removable / roll off section with a minimum 600mm offset on each side of the sewer.  

  **Driven piles are not permitted.**

| D.   | Property connection branch servicing an adjoining property | **Works over property connection branches servicing adjoining properties are not permitted as it creates an unacceptable risk to the relevant water corporation’s obligations in providing a service to a neighbouring customer.**  

Works adjacent to an adjoining property connection branch require:  
- A minimum 600mm horizontal clearance between the proposed works / foundation and the property connection branch is to be maintained.  
- Pad footings / foundations are permitted.  
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  

*Driven piles are not permitted.* |
| E.   | Property connection branch servicing own property | Works adjacent to property connection branch require:  
- A minimum 600mm horizontal clearance between the proposed works / foundations and the property connection branch is to be maintained.  
- Pad footings / foundations are permitted.  
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.  

Works traversing a property connection branch require in addition to the above:  
- A minimum 600mm horizontal clearance between the proposed structure / foundations and the outside edge of the sewer branch is to be maintained.  
- The tennis company to provide a detailed work method for accessing property connection branch if maintenance work is required.  
- Slab plan to scale indicating the location of full depth saw cuts / breakup slab sections or construction / expansion joint sections where traversing a property connection branch.  
- Pier and beam footings / foundation traversing the sewer main must be a minimum 600mm away but no further than 1.0m.  
- Foundations traversing the property connection branch must maintain a minimum 600mm vertical clearance.  
- Pad footings / foundations are permitted.  
- Where pad footings are not structurally acceptable, the footings / foundations must extend a minimum depth to the angle of repose to the invert level of the sewer main.  

*Driven piles are not permitted.* |
### F. Maintenance hole

**Guidelines**: Works over maintenance holes are not permitted as 24-hour unobstructed access is required.

**Works adjacent to a maintenance hole chamber require**:

- 1.0m horizontal clearance from the outside edge of the cover surround.
- Pad footings / foundations are permitted.
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by the structure.
- Maintenance hole cover levels must match new surface levels. Where alteration works are applicable the works are to be carried out by the relevant water corporation at the owner’s expense.
- Where a structure is to be constructed boundary to boundary, suitable access (which meets OH & S guidelines) to the sewer maintenance hole must be provided to allow maintenance equipment and personnel access at all times.

**NOTE**: Driven piles are not permitted.

- Maintenance holes can only be opened by the relevant water corporation’s authorised personnel.

### G. Maintenance shaft

**Guidelines**: Works over maintenance shafts are not permitted as 24-hour unobstructed access is required.

**Works adjacent to a maintenance shaft require**:

- A minimum 800mm horizontal clearance from the centre line of the cover.
- Pad footings / foundations are permitted.
- Where pad footings are not structurally acceptable, footings / foundations must extend to a minimum depth to the angle of repose to the invert level of the sewer main, to ensure that no additional load will be placed on the sewer by structure.
- Maintenance shaft cover levels must match new surface levels. Where alteration works are applicable the works are to be carried out by the relevant water corporation at the owner’s expense.

**NOTE**: Driven piles are not permitted.

- Maintenance shafts can only be opened by the relevant water corporation’s authorised personnel.

### L. Ground anchors

**GROUND ANCHORS**

Where ground anchors are to be used the following requirements are to be met:

- A plan showing the sewer main clearly plotted against the cross section and the long section showing 1.0m clearance is being met between the ground anchors and the sewer main
- 1.0m clearance being met will also need to be shown for any property connection branches, inspection shaft and maintenance holes.
- A site plan will be required showing the building in relation to the title boundaries.
- Care will need to be taken when installing these tendons to ensure that these clearances are obtained between the owner’s tendons and the relevant water corporation’s assets.
- CCTV inspections will be required, one prior to works commencing and a second inspection once works have been completed both at owners cost. This will allow the checking of the condition of any sewer assets before ground anchors are installed and one after installation. The CCTV footage before and after works will also provide evidence should repair works be required on the relevant water corporation’s assets.

**NOTE:**

Any rectification works required due to damage caused by ground anchors will be at owner / developer cost.

GROUND ANCHORS

NOTE: Plans must show actual minimum clearances at all points that the sewer is crossed by ground anchors.

Version 2 January 2015. Content subject to change without notice
DECKING OVER SEWER

1. Decking must be designed to be fully demountable.

2. Minimum 600mm from Sewer Main or Property Connection Branch.

3. Minimum 600mm from Pad Footings.

4. 1.2 Metre Removable Panel Over Property Connection Branch.

Sewer Main
GARAGE TRAVERSING SEWER MAIN

First storey must maintain a minimum 600mm horizontal clearance from outside edge of sewer main.

No loading from the first storey area can be supported / transferred to the outside ground floor footing/ foundation of the garage. Height clearance will be applicable.

Non Structural In Fill Concrete Slab.

- Bored or excavated piers to engineers design.
- Saw cut/const joint 1.2m wide centrally located over sewer.

NOTE: All foundation design to be in accordance with Structural Engineer design/local council requirements. Drawings & written confirmation by an engineer must be submitted confirming the above.

SECTION A-A

Load bearing foundation must be minimum of 1.0 metre horizontal clearance from edge of sewer main or outside of easement whichever is greater.
DEMOUNTABLE LIGHT WEIGHT STRUCTURE

* Where pad footings are structurally permitted

**Diagram A**

- Sewer Main

**Diagram B**
- Min. 600mm
- Sewer Main

**Diagram A**
- Traversing a sewer main

**Diagram B**
- Parallel to sewer main
BRICK/TIMBER - NON DEMOUNTABLE STRUCTURES

NOTE: Only applicable for sewer mains less than 3.5m deep.

Diagram A:
- Min. 600mm vertical clearance must be maintained
- Traversing a sewer main

Diagram B:
- Parallel to sewer main

Note: Foundations bridging over sewer main may be of concrete pier, screw piles or strip type.
POOLS AND SPA’S

In-ground pool or spa

Min 1.0m clearance required from the outside edge of the sewer main and the edge of the coping.

Note: Engineer’s report must be provided stating that NO ADDITIONAL LOAD will be placed on the sewer main by the swimming pool.

Above ground demountable pool or spa

Min 600mm

PERMITTED TO BUILD OVER EXCEPT CONCRETE SEWER MAINS
DRIVEWAYS AND PAVING

Commercial

Approved heavy type cover required for maintenance hole.

Where the surface level is to be altered, the maintenance hole is to be adjusted to suit the finished level. (Work to be undertaken by relevant Water Authority at owners expense).

A minimum 900mm clearance from the underside of the driveway to the top of the pipe is to be maintained.

Residential

Approved medium type cover required for non vehicle areas.

Heavy type for vehicular areas.

Where the surface level is to be altered, the maintenance hole is to be adjusted to suit the finished level. (Work to be undertaken by relevant Water Authority at owners expense).

A minimum 750mm clearance to the top of pipe is to be maintained.
NOTE: Clearances also apply to Property Service Drains
STRUCTURALLY INDEPENDENT ROOFING

Double Rafter/Truss Independently Supported

GARAGE

DWELLING

Minimum Clearances Apply

Sever Main

Construction Joint
GROUND FLOOR CANTILEVERING

100mm infill Concrete Slab

Min 300mm required

Min 600mm

Max 1.0m

Bored pier or strip footing founded below the angle of repose

SECTION A-A

Ground Floor cantilevered suspended beam to Engineer’s design must be on verified bedrock. A Geotechnical report confirming this will be required.

NOTE: The use of form work is required to prevent concrete over pour and must be stripped after pour.
CLEARANCES REQUIRED FROM ASSETS

THE CLEARANCE IS TAKEN TO THE CLOSEST PART OF THE WORKS, BE IT FOUNDATION OR WALL.
