

Accredited Contractors List

To undertake construction work for the land development industry

Updated 15 January 2019

Disclaimer

The firms and individuals on this list have represented to South East Water that they have the management capability, qualifications, expertise, and experience as well as technical capability to carry out the categories of work listed below. South East Water makes no guarantees or warranties as to the performance, commercial practices or financial status of these firms. South East Water does not endorse any of the products or services offered by the firms or individuals listed. It is strongly recommended that you undertake normal diligence procedures to select appropriate accredited contractor.

Sewer and water supply construction works and services categories:					
SC1	Reticulation ≤ DN 280 and ≤ 5m in depth	WC1	Reticulation water mains ≤ DN 280	R1	Risk Overlay – Ground conditions
SC2	Branch/main sewers > DN 280 or reticulation > 5m in depth	WC2	Distribution water mains > DN 280	R2	Risk Overlay – High density
SC3	Reticulation pressure pipelines in sewerage systems < DN300 (not rising main)	WC3	Water supply pumping station & pressure control system	R3	Risk Overlay – Major crossing
SC4	Sewerage pumping station (prefabricated) & sewer rising main	WC6	Steel pipelines		
SC5	Sewerage pumping station (cast-in-situ) & sewer rising main	WC8	Storage structure construction		
SC7	Any works undertaken on live sewer assets				

Accreditation tiers

(Refer to Land Development Accreditation Deed **Schedule 6 – Performance Regime** for details)

Self-Certified: Top performing (based on Performance Reports), evidence of continuous improvement, self-reporting, satisfactory Office Audit Report, **accreditation reviewed after 2 years.**

Certified: Commitment to continuous improvement, evidence of non-conformance rectification, satisfactory response for non-conformance, satisfactory safety records, **reviewed after 2 years.**

Qualified: Procedures in place for non-conformance rectification, satisfactory office audit report, accredited key personnel, Public Liability insurance, **accreditation reviewed after 1 year.** (Opportunity to demonstrate performance and ongoing business).

Sewer and water supply construction categories:

Sewer		Water	
SC1	Reticulation: Construction of gravity sewerage mains ≤ DN 280 and ≤ 5m deep including all pipe, fittings and structures.	WC1	Reticulation water mains: Construction of reticulation drinking and non-drinking water pipelines ≤ DN 280 including all pipes and fittings.
SC2	Branch/main sewers: Construction of gravity sewerage mains > DN 280 or > 5m deep including all pipe, fittings and structures.	WC2	Distribution water mains: Construction of distribution drinking and non-drinking water pipelines >DN 280 including all pipe, fittings and structures.
SC3	Reticulation pressure pipelines in sewerage systems: Construction of pressure sewerage reticulation networks < DN 300 (not rising main) including all of the pressure network components and property branches up to and including the boundary kits.	WC3	Water supply pumping Station & pressure control system: Construction of drinking and non-drinking water supply pumping stations and/or pressure control systems including all civil, mechanical and electrical components and structures.
SC4	Sewer pump station (prefabricated) & sewer rising main: Construction of prefabricated sewage pumping stations including all civil, mechanical and electrical components and storage structures.	WC6	Construction of steel mains including the supply, installation, testing and commissioning
SC5	Sewer pump station (cast-in-situ) & sewer rising main: Construction of concrete cast-in-situ sewage pumping stations including all civil, mechanical and electrical components and storage structures.	WC8	Storage structure: Construction of structure designed to store drinking water and non-drinking water in excess of 20kL. Includes all civil, mechanical and electrical components and structures.
SC7	Any works undertaken on live sewer assets Connection of sewer pipelines to an existing live sewerage system. Modification to an existing live sewerage system such as realigning a pipeline. This includes the lifting of maintenance hole covers.		

Risk	
R1	<p>Ground conditions: This overlay is required in addition to another category when the works are to be undertaken in ground which may:</p> <ul style="list-style-type: none"> • Be contaminated to the extent that it may be a hazard to workers or customers connected to the service, Have an AHBP (Average Horizontal Bearing Pressure) < 50 kPa (eg: Coode Island silt) • Have a water table above or close to the asset being constructed • Be subject to acid sulphate conditions • Be subject to slippage.
R2	<p>High density: This overlay is required in addition to another category when the works are to be undertaken in an area where there are multiple buildings four or more stories high or continuous high density retail premises.</p>
R3	<p>Major crossing: This overlay is required in addition to another category when the works to be undertaken involve crossing a:</p> <ul style="list-style-type: none"> • Significant waterway which contains water on a permanent or near permanent basis (ie: the waterway is visible from satellite images or a map) • Highway or freeway which contains 4 or more lanes • Railway easement managed by Victrack.
