Belgrave & Selby Sewerage Scheme

Project update – September 2016

South East Water has installed over 18 kilometres of sewer pipeline for the Belgrave and Selby Sewerage Scheme enabling approximately 600 properties to connect. Connections commenced in February 2014 and to date over 240 properties have been connected.

Due to extreme ground conditions of hard rock, works on the last section of the scheme were halted in May 2014. This was to allow us to investigate alternative technologies, engineering methods and designs to determine the best solution to complete this project, without having to use prolonged periods of rock hammering.

South East Water has determined a solution, which has been approved by the relevant stakeholders, including Yarra Ranges Shire Council.

Preconstruction works commenced on 22nd August 2016 with some tree removal to facilitate the sewer installation.

Construction works will commence from 5th September 2016, and it is anticipated that works will be completed prior to Christmas (*weather permitting*). Once the works are completed, any areas affected by the works will be reinstated as close as possible to their original condition.

Our connections team will hold an information session in November to further inform you on the connection process and costs. We will contact you at least four weeks in advance to advise you of the date, time and venue.
