Where will the works commence?

Construction on this project has been divided into seven sections (please see map overleaf). Works will commence in Section A along Flinders Street and Nepean Highway. Crews will continue working along the sewer alignment in a southerly direction towards Mordialloc.

How long will work in each section take?

It is anticipated that each section marked on the map will take approximately one week to complete (weather permitting). This is except for Section D, which is estimated to take two weeks to complete. As work crews will be mobile throughout this renewal, there will be no fixed project site office. Every effort will be made to move through each work section as quickly as possible.

Will my driveway be affected?

There will be some instances when we will need to block a resident driveway to access the sewer manholes. If we do need to block your driveway, we will notify you in person and where possible, provide at least 24 hours’ notice so that alternate parking arrangements can be made.

Will there be road closures during the works?

No. It is not anticipated that any roads will need to be closed to facilitate works. However, sections of the southern lane on White Street will be blocked. Road users will still be able to travel in both directions with minor delays.

Will the works impact my water or sewerage services?

No. If you experience any disruption to your water or sewerage services please call our Faults and Emergency Department, which operates 24 hours a day, on 132 812.

Will the works impact on any other services?

No. If you experience any interruption to your gas, electricity or telephone services during the project period, please call your service retailer for more information.

Do I have to pay for these works?

No. There is no cost to the property or business owners for these works.

Will you repair any damage?

Yes. At the completion of works, permanent reinstatement will be carried out across the work site to restore any areas impacted by construction, as close as possible to their original condition.
